Use Case Name:	View Visual Data		
Use Case ID:	UC-01	**Last Updated By:**	Aneeta
Created By:	Shania	**Last Revision Date:**	10/23/2025
Date Created:	10/22/2025		
Description:	This use case occurs when a user who identifies themselves as an experienced investor wants to view the global diversification of their current investments. It begins when the user uploads their investment data. The data is sorted visually, which essentially allows users to scroll and view a globe to view the countries they have invested into.		
Primary Actor:	User		
Supporting Actors:	Database, AI		
Offstage Actors:	System Timer		
Stakeholders and Interests:	User/Investor: Wants a visual representation of their global investment to make information decisions Technical Support: Ensure the visualization of data is accurate and operates correctly Database: Is retrieving data that has been stored to be formatted		
Preconditions:	User is logged in to their account User has uploaded portfolio data		
Postconditions:	Data is organized into the globe The visual data uses the most recent update to data		
Main Flow:	1. User logins in to the application 2. System authenticates login 3. User navigates to main menu 4. User clicks the option to view the globe 5. The system retrieves the user data 6. The system sorts the data by countries 7. The system maps the data into a globe 8. The system loads the page and displays content 9. User can interact with the globe and scroll		
Alternative Flows:	5.a. The system preloads an existing version of the globe, if it has been used before 5.b The system retrieves the user data and updates changes		
Exceptions:	5.a. If database is down, display error message 1.a. If web-application service is down, display error message		

Non-Functional Requirements:	Must be able to view on desktop or mobile Must load data quickly: • Usability: - Globe can be interacted with by user - UI is intuitive, text is large enough to read • Performance: - Data must be sorted into the globe within 10 seconds • Supportability: - Web page should be formatted for mobile and desktop
Frequency of Use:	High, most investors will frequently use this page to understand their own portfolio
Assumptions:	User: - has a basic sense of tech literacy - has made an account - has an internet connection
Notes and Issues:	The data is only formatted into a viewable globe, which the user can hover and view percentages. The higher percentage invested into a certain country, the colour of it will appear to be a darker red (>=50%). Some countries do not allow foreign investors, therefore it will appear greyed out. Only Canadian investors are able to use the app. Real time currency conversion needs to be implemented.
