Use Case Name:	Update Content		
Use Case ID:	UC-02	**Last Updated By:**	
Created By:	Shania	**Last Revision Date:**	10/24/2025
Date Created:	2025-10-24		
Description:	Content creators are given a controlled administrative access to the site, which allows them to upload, remove, or modify content in the system.		
Primary Actor:	Content Creator		
Supporting Actors:	Content reviewer, Database, Subtitler, Video editing application		
Offstage Actors:	User		
Stakeholders and Interests:	Content creator: Wants to modify content User: Wants to view content Database: Content is stored into a cloud, changes are updated and validated Content Reviewer: The content is reviewed in case of any violations Subtitler: Multi-language support is added by subtitles in English and French		
Preconditions:	Creator is logged into an admin account Content creator has the right account permissions to make changes Database has enough space to support changes		
Postconditions:	Updated content is saved and published Content is stored in the database		
Main Flow:	1. Creator logs into their administrative account 2. System verifies credentials and loads dashboard 3. Creator navigates to the content modification page 4. System loads the page after retrieving content from database 5. Creator selects an option to either add, delete, or modify existing content 6. Creator modifies content 7. Creator publishes change 8. System validates the changes and saves it to the database 9. System publishes the updated version 10. System sends a confirmation message to the creator		
Alternative Flows:	6.a. Creator saves a draft before publishing 8.a. System saves the draft 8b. Creator publishes it at a later date		

Exceptions:	8.a. If database is down, display error message 1.a If web-application is down, display error message 5.b If file size of content is too large or too small, warn the creator and reject changes 5.c. Invalid format of content
Non-Functional Requirements:	• Usability: - The UI is simple and minimalistic, easy to navigate • Reliability: - Can be able to rollback to a previous version of content - Database is constantly saving older versions, and once everyday if no content if no new content is made - Oldest version is overwritten if it has been updated 10 times afterwards • Performance: - Must load page and content within 10 seconds - Must be able to handle at least 1000 users at all times • Supportability: - Must be able to access the page from mobile and desktop - Changes made to content must be immediate - All changes are documents and logged
Frequency of Use:	Medium, expect less users to be using the educational module relative to the data page
Assumptions:	Content Creator: - Creator has been trained - Creator is knowledgeable on investment - Music, pictures, graphs, etc are all licensed
Notes and Issues:	N/A
